

[illegible]

The figure is a 2D plot with 'Channel State' on the X-axis (ranging from 0 to 7) and 'Battery Level' on the Y-axis (ranging from 0 to 5). The plot displays a grid of colored circles, where the color of each circle represents a value, likely related to the battery level or channel state. The colors range from light yellow (low value) to dark green (high value). The circles are arranged in a grid where the X-axis represents Channel State and the Y-axis represents Battery Level. The color of the circles indicates a value, with darker green representing higher values and lighter yellow representing lower values. The values are highest (darkest green) at the top-left corner (Channel State 0, Battery Level 5) and decrease towards the bottom-right corner (Channel State 7, Battery Level 0).
