

[illegible]

The figure is a 2D plot with 'Channel State' on the x-axis (ranging from 0 to 7) and 'Battery Level' on the y-axis (ranging from 0 to 5). The plot displays a grid of colored circles. The color of the circles represents a value, likely the 'Value' from the table. The colors range from light yellow (low value) to dark green (high value). The plot shows that the value generally increases with both Battery Level and Channel State, with the highest values (dark green) occurring at higher Battery Levels and Channel States.
